Notes to overview

MKinsight directly follows the three-tier architecture model (presentation (client), logic (IIS), data (SQL Server))

Software is proven to work in Citrix environments (using Citrix presentation client) alongside or instead of a 'fat client' installation, using a wizard-style installer

VPNs and token authentication schemes are not specifically required. Software can run in a default mode requiring username and password combination (held internally by MKinsight), or using Active Directory.

Minimum Hard Disk requirements (in addition to the OS requirements): Database server 50Gb – Web server 250Gb
